(5) (e) monitoring corporate schedule organizer for location change in the recipient's schedule;

(6) (f) updating recipient's scheduled location according to location changes monitored in (e); and

(7) (g) allowing access to updated schedule to facilitate delivery of message to recipient at updated scheduled location.

Claim 6(original): The method as claimed in claim 5 wherein the recipient updates the recipients scheduled location and/or delivery preference in step (d).

Claim 7(amended): A method for locating a recipient of a message in a corporation using a computerized system comprising:

(1) (a) compiling a database of a recipient's scheduled location, the recipient's delivery preference and the corporation's preference;

(2) (b) providing access to recipient's location and delivery preference database of (a);

(3) (c) updating the recipient's scheduled location and/or delivery preference;

(4)(d) setting priority of conflicting corporate and recipient preference;

(5)(e) allowing access to updated schedules and delivery preferences to facilitate delivery of message to recipient at updated scheduled location.

Claim 8(amended): A computer based system for locating a recipient of a message in a corporation using a computerized system comprising:

(1) (a) A component for compiling a database of an recipient's scheduled locations, the entities delivery preference and the corporation's preference;

(2) (b) a database containing the recipient's scheduled location, the entities delivery preference and the corporation's preference;

(3) (c) a component for providing access to recipient's location and delivery preference in database (b);

(4) (d) a component for updating the recipient's scheduled location and/or delivery preference; and

(5)(e) a component for allowing access to updated schedule and delivery preference to facilitate delivery of message to recipient at updated scheduled location.

Claim 9(amended): A computer based system for locating a recipient of a message in a corporation using a computerized system comprising:

(1) (a) a component for compiling a database of an recipient's scheduled location, the recipient's delivery preference and the corporation's preference;

(2)(b) a database containing the recipient's scheduled location, the entities delivery preference and the corporation's preference;

(3) (c) a component for providing access to the database of (b);

(4) (d) a component for providing access to corporate schedule organizer;

(5)(e) a corporate schedule organizer;

(6)(f) a component for updating recipient's scheduled location in corporate schedule organizer;

(7)(g) a component for monitoring corporate schedule organizer for location change in the recipients schedule and updating database (b) with schedule location change; and

(8)(h) a component for allowing access to updated schedule(s) to facilitate delivery of message to recipient at updated scheduled location.

Claim 10(amended): A computer based system for locating a recipient of a message in a corporation using a computerized system comprising:

(1)(a) a component for compiling a database of a recipient's scheduled locations, the

recipient's delivery preference and a corporation's preference;

(2) (b) a database containing recipient's scheduled locations, the recipient's delivery preference and the corporation's preference compiled in (a);

(3)(c) a component for providing access to recipient's location and delivery preference database (b);

(4)(d) a component for updating the recipient's scheduled location and/or delivery preference;

(5)(e) a component for setting hierarchy of conflicting corporate and recipient preference;

(6)(f) a component for allowing access to updated schedules and delivery preference to facilitate delivery of message to recipient at updated scheduled location.
